

## Pewter Casting: Let's Talk Matter

Subject: 6<sup>th</sup> Grade Science

Lesson: Pewter Casting: Let's Talk Matter

Standard Addressed: Understand the structure, classification, and physical properties of matter. (NC.6.P.2)

Objectives:

- Reinforce that all things are matter and exist as a solid, liquid or gas.
- Display the effects of heat on the motion of atoms as they change phases.
- Understand that the addition of heat to certain materials can change a solid to a liquid thereby changing the material's shape.

Materials Needed:

- Device for showing *Pewter Casting: Let's Talk Matter* video (<https://youtu.be/RxspjVxstsQ>)
- Balloons or plastic zip bags (3 per student): one (1) filled with water; one (1) filled with frozen water; and one (1) filled with air
- A pin or sharpened pencil
- A container to catch any spilled water
- "Pewter Casting: Let's Talk Matter" Activity sheet

Outline:

- Prior to the lesson, students should understand:
  - On earth, the three common states of matter are solid, liquid and gas.
  - Matter is made up of particles too small to be seen.
  - Matter undergoes changes through the application of heat.
- Direct the students through Activities 1 & 2. Have students observe the physical properties of the water both when it is in the bag and as they pour it into the container.
  - Does the water take up space?
  - Does it have mass?
  - Is it visible?
  - Can it change shape?

(Encourage the students to use words such as *hard*, *invisible*, *wet*, *splashy*, etc.)

- Students will complete the charts for Activities 1 & 2 in groups. They will complete Activity 3 individually.

## Pewter Casting: Let's Talk Matter

Subject: 6<sup>th</sup> Grade Science

Lesson: Pewter Casting: Let's Talk Matter

Standard Addressed: Understand the structure, classification, and physical properties of matter. (NC.6.P.2)

Take It Further: You can further investigate changes in matter according to heat by having students place ice in a saucepan and take the temperature of the pan when the ice starts to melt. The melting point of pewter in the video is about 446°F. What about the melting point of sugar? Of chocolate? Of butter?

Cross Curriculum Connection: Have the students play-act what the molecules in a block of ice might look like as the ice heats up and starts to melt.

## Pewter Casting: Let's Talk Matter

Grade 6 Science

Name: \_\_\_\_\_

Date: \_\_\_\_\_

**Activity 1:** We saw in the video how pewter can be a solid or a liquid depending on temperature. Now you will be using your powers of observation to perform a demonstration about solid, liquid and gas.

Carefully observe each balloon.

Investigate the contents of the three balloons and write your observations in the chart below.

	What does the balloon look like?	How does the balloon feel when you compress it?	Describe the temperature of the balloon.
<b>Air Balloon</b>			
<b>Water Balloon</b>			
<b>Ice Balloon</b>			

## Pewter Casting: Let's Talk Matter

Grade 6 Science

Name: \_\_\_\_\_

Date: \_\_\_\_\_

**Activity 2:** Put each balloon into a container. Predict what you think will happen when you pop the balloon. Write your predictions in the table. Now take the pin and pop one balloon at a time, observing what you see and hear as you do. Write your observations in the table.

	What I think will happen when I pop the balloon.	What happened when I popped the balloon?
<b>Air Balloon</b>		
<b>Water Balloon</b>		
<b>Ice Balloon</b>

**Activity 3:** Draw a diagram of what the atoms look like in this state of matter.

<b>Air</b>	
<b>Water</b>	
<b>Ice</b>	

**Activity 4:** Use the ice for this activity. Rub the ice with both hands for 1 minute.

- What is happening to the ice?
- What is happening to your hands?
- Explain the process of heat transfer in this activity.

### Activity 1:

We saw in the video how pewter can be a solid or a liquid depending on temperature.  
Now you will be using your powers of observation to perform a demonstration about solid, liquid and gas.

- Carefully observe each balloon.
- Investigate the contents of the three balloons and write your observations in the chart below.

	What does the balloon look like?	How does the balloon feel when you compress it?	Describe the temperature of the balloon.
<b>Air Balloon</b>	Students should use words like <i>invisible, empty, full, tight, etc.</i>	Students should use words like <i>soft, squishy, full, firm, etc.</i>	Students should use words like <i>room temperature, normal, body temperature, etc.</i>
<b>Water Balloon</b>	Students should use words like <i>squishy, full, clear, etc.</i>	Students should use words like <i>squishy, floppy, full, changes shape, etc.</i>	Students should use words like <i>lukewarm, cool, room temperature, body temperature, etc.</i>
<b>Ice Balloon</b>	Students should use words like <i>hard, full, cloudy, etc.</i>	Students should use words like <i>hard, firm, doesn't change shape, etc.</i>	Students should use words like <i>cold, very cold, freezing, etc.</i>

## Pewter Casting: Let's Talk Matter

Grade 6 Science

**ANSWER KEY**

Name: \_\_\_\_\_

Date: \_\_\_\_\_

**Activity 2:** Put each balloon into a container. Predict what you think will happen when you pop the balloon. Write your predictions in the table. Now take the pin and pop one balloon at a time, observing what you see and hear as you do. Write your observations in the table.

	What I think will happen when I pop the balloon.	What happened when I popped the balloon?
<b>Air Balloon</b>	Students can make their own predictions.	Students should describe the balloon deflating and air escaping into the room. The air cannot be seen taking the shape of the room.
<b>Water Balloon</b>	Students can make their own predictions.	Students should describe the balloon deflating as it loses water. The water can be seen changing shape as it moves from the balloon to take the shape of the container.
<b>Ice Balloon</b>	Students can make their own predictions.	Students should describe the balloon resisting to change shape as the ice itself does not change shape.

## Pewter Casting: Let's Talk Matter

Grade 6 Science

### ANSWER KEY

Name: \_\_\_\_\_

Date: \_\_\_\_\_

**Activity 3:** Draw a diagram of what the atoms look like in this state of matter.

<b>Air</b>	
<b>Water</b>	
<b>Ice</b>	

**Activity 4:** Use the ice for this activity. Rub the ice with both hands for 1 minute.

- What is happening to the ice?  
Student should describe the ice slowly warming and starting to get wet. If they keep going, it may even start to drip water.
- What is happening to your hands?  
Student should describe their hands getting colder as they go. And after they are done, their hands may remain cold for several minutes.
- Explain the process of heat transfer in this activity.  
The thermal energy of the student's hands transfers heat to the ice, allowing the atoms to vibrate more frequently until both are at an equilibrium.
