

LESSON PLAN

Subject: 6th Grade Science

Lesson: Brass Casting: Sea of Electrons

Standard Addressed: Understand the structure, classifications, and physical properties of matter. (NC.6.P.2)

Objectives:

- Identify the effects of heat on the motion of atoms and a compound of molecules through a description of what happens to particles during a change of phase.
- Identify the physical properties of pure substances that are independent of the amount of matter present including density, boiling point, melting point, and solubility.

Materials Needed:

- Device for showing Brass Casting: Sea of Electrons video
- "Brass Casting" activity

Outline:

- Prior to this lesson students should understand that elements are made up of atoms and that atoms of one element are alike but are different from atoms of other elements.
- Show the 7:17 minute video, <u>https://youtu.be/iZ9c3v9f8fg</u>.
- Discuss the activity prompt.
- Students finish the activity independently or with a partner. (For a more challenging activity, cover the riddle and blanks before making copies. Ask the riddle at the completion of activity to see if students can decipher the answer.)

Take It Further: Students compare the densities of a dime and a penny using the water displacement method. Modify the instructions in this link that compares the densities of iron and aluminum: <u>https://www.youtube.com/watch?v=h7owl6gC_wk</u>.

Cross-Curriculum Connection: Choose two elements from the Periodic Table and write a love song about their chemical interaction.

All matter is made of elements. Metalworkers in Salem had to know the physical and chemical properties of a variety of elements. How much do you know about matter?

Circle your responses to the questions and statements below. When you are finished, write the letter of the answers you selected on the corresponding spaces to solve this riddle:

What do you call an iron/carbon alloy that never gets embarrassed?

	1	2	3	4	5	6	7	8	9
			10	11	12	13	14		
1. Based	on the info	ormation	in the v	ideo, circ	cle the c	orrect st	atement		
S.	There are	e more n	netals th	an non-n	netals in	the per	iodic tab	le.	
Т.	There are	e more <i>n</i>	on-meta	<i>ls</i> than n	netals in	the per	iodic tab	le.	
2. In what	stage of	matter d	o particle	es move	the slov	vest?			
F.	Plasma					H. Solid			
G.	Liquid					I. Gas			
3. Solids	nave:								
A.	A. Definite shape and definite volume					C. Definite shape, but not definite volum			
В.	No defini	te shape	; no defi	nite volu	me	D. Defin	ite volun	ne, but n	ot definite sha
4. A chan	ge in matt	er from	solid to l	iquid is c	alled:				
J.	Condensa	ation				L. Evapo	oration		
K.	Freezing					M. Melti	ng		
5. The ato D.	oms in liqu Faster th	iids mov an atom	e: s in gase	es		F. Faste	r than at	oms in p	blasma

- E. More slowly than atoms in gases
- G. More slowly than atoms in solids

BRASS CASTING: S	Sea of Electrons						
Grade 6 Science							
Student Name:	Date:						
6. Change in the state of matter from a liquid to a gas is called:							
K. Condensation	M. Melting						
L. Evaporation	N. Freezing						
7. Gases have:							
E. Lower density than solids	G. The same density as liquids						
F. Greater density than solids	H. The same density as solids						
8. Humans have discovered:							
R. More than 1,000 elements	S. More than 100 elements						
9. The smallest unit of matter is called:							
Q. An element	S. An atom						
R. A molecule	T. A metal						
10 . An example of a physical property is:							
P. Flammability	R. Acidity						
Q. Reactivity	S. Boiling Point						
11. Which list of properties can be used to identify a substance?							
T. Density, Boiling Point, and Solubility	U. Density, Melting point, and Saturation						
12. Atoms of the same element:							
E. Have the same masses	G. Have different volumes						
F. Have the same temperature	H. Have different solubilities						
13. Thermal energy is in which phase of matter?							
B. Solids	D. Gases						
C. Liquids	E. All phases of matter						
	turna ia ina ana al0						

14. What happens to molecules when the temperature is increased?

K. The molecules get closer together. L. The molecules move faster.

ACTIVITY 2

Matter can exist in different phases. *Write the words describing the phase changes inside the arrows.*

Energy is being removed.

ACTIVITY 1

All matter is made of elements. Metalworkers in Salem had to know the physical and chemical properties of a variety of elements. How much do you know about matter?

Circle your responses to the questions and statements below. When you are finished, write the letter of the answers you selected on the corresponding spaces to solve this riddle:

What do you call an iron/carbon alloy that never gets embarrassed?

1. Based on the information in the video, circle the correct statement.

S.)There are *more metals* than non-metals in the periodic table.

T. There are more *non-metals* than metals in the periodic table.

2. In what stage of matter do particles move the slowest?

- F. Plasma (H.)Solid
- G. Liquid
- 3. Solids have:
 - A. Definite shape and definite volume
 - B. No definite shape; no definite volume
- **4.** A change in matter from solid to liquid is called:
 - J. Condensation
 - K. Freezing
- **5.** The atoms in liquids move:
 - D. Faster than atoms in gases
 - E. More slowly than atoms in gases

- C. Definite shape, but not definite volume
- D. Definite volume, but not definite shape
- L. Evaporation

I. Gas

- F. Faster than atoms in plasma
- G. More slowly than atoms in solids
